AutoCAD can be used to control external applications (see External AutoCAD applications) using the ExternalCOM framework. A third-party application may use "GetInfo" messages to communicate to AutoCAD, or AutoCAD can use "Find" messages to search for third-party applications. The third-party application typically creates a screen with a list of available third-party applications. AutoCAD can search for and select the third-party application. ## What's New In?

In the Import Assistant dialog box, select an import source, then select the Import To drop-down list to specify which sheets or parts to import. You can import point data, image data, or direct into an AutoLISP-based component. Imported point data is stored as a visible object in your drawing. When you mark up your drawing with annotations or drop-down menus, this object is automatically marked up. Importing image data lets you create an image with your hand or mouse on your drawing that contains a specific object. This object is incorporated into your drawing. With AutoLISP import, create your own drawing components to import point, image, or other data, and then edit the document, based on the imported data, with your own code. AutoLISP import is offered in the following methods: in the Import Assistant dialog box, in the menu Command, or from the File menu. Annotations: Enter annotations that include callouts, notes, and dimensions, on AutoCAD drawings. You can share annotations with other users, on the Internet, and in a web browser. (video: 2:37 min.) You can create, edit, and delete annotations. Annotations are available to all users, regardless of their role in your organization. You can also share a link to annotations that are stored on your drawing, a web page, or an email message. Annotation previews: You can preview an annotation in the bottom-left corner of the drawing, with a visual effect similar to that of a link. You can see and interact with the annotation, and you can select its components. You can have annotations in multiple types of formats, which you can manage in the DesignCenter or SharePoint Workspace. For more information, see Manage annotations. Communities: Increase collaborative productivity by building and using communities in AutoCAD. (video: 2:27 min.) Communities let you collaborate with others on projects, while sharing and exchanging comments, ideas, and annotations. Communities include: Drafts Journals People Drawing Notes Documentation For more information, see Designing Communities. Cut marks: Cut marks can improve your design by specifying changes in part orientation or by limiting the ability to undo changes in a drawing.
