NoVirusThanks Kernel-Mode Driver Loader allows you to load or unload a specific kernel module from the system. The application can be downloaded and installed on your computer with ease since it requires you to accept the End-User Agreement. No additional configuration is required on your part and the application can be automatically launched after installation by ticking the corresponding checkbox. NoVirusThanks Kernel-Mode Driver Loader features a simplistic, yet accessible user interface. A few buttons are provided on it which include the Load, Unload, Unload All, and Help functions. The first one allows you to easily load a kernel module, while the latter two ones let you uninstall the same from the system. The program has no form of help manual, but you can still use a well-written user guide to get acquainted with its functions. NoVirusThanks Kernel-Mode Driver Loader is a lightweight kernel-module driver loader and unloader. This is a video I made on my YouTube channel about how to install the above-mentioned software on your PC. The present invention relates to a planar antenna suitable for use in a mobile communication apparatus and, more particularly, to a planar antenna having an excellent performance in a mobile communication apparatus. In a mobile communication apparatus, such as a portable telephone, a planar antenna is used. For example, Japanese Unexamined Patent Publication No. 8-127597 discloses a planar antenna having an element pattern formed on a metallic wiring substrate and serving as a radiating element. It is preferred that the planar antenna is installed in a mobile communication apparatus in a condition of being folded or folded back so as not to protrude from the case. Further, it is preferred that the planar antenna is installed in a condition of being assembled with the case. The planar antenna is preferably made in a compact size and configured in a form of being folded so as not to protrude from the case when the planar antenna is installed in the case. In the related art, however, the antenna element is fixed to a side surface of the case. Therefore, it is necessary to provide a connecting section for connecting an external electrode for supplying electric power to the antenna element. This means that a size of the case must be increased and that the case is made in a
