How to use and how to solve issues Create backups for full emuNAND or sysNAND You can backup emuNAND or sysNAND files separately by clicking on the button named "Backup emuNAND" or "Backup sysNAND" on the main screen. You can do this in two ways: If you have an SD card with a valid NAND, the backup will be saved into the SD card. You can back up the NAND to the SD card with any SD card reader if you want. If you only have one SD card with a valid NAND, you can create a backup from the SD card with a removable hard disk. By default, all the folders in the system are excluded from the backup. To include them, simply select them. For example, if you want to save just emuNAND but not sysNAND,
