Keymacro is a lightweight alternative to Microsoft's AutoIt. Why is this so? If you have been using AutoIt, you will find it cumbersome to configure macro programs, as you need to set the parameters one at a time. AutoIt does not have a graphical interface, which means that you need to use the command line for everything, including how to save and load the code. Keymacro is

a simple and easy to use GUI-based program. You start the program by clicking on the Keymacro tray icon and a pop-up dialog appears. This dialog shows the main window that you can use for macros. The left column lists the available macros, while the right column shows the settings that you can apply to those macros. Some of the settings include:

- * Key combinations: This option lets you set a single key combination to trigger a macro. Each item will trigger the macro when pressed.
- * Sub-key: This lets you assign one key to a sub-key of another. For example, pressing Alt+Alt+V will open the “Assign Macro” dialog box and you can assign the Alt key to any key from the menu.
- * Delays: You can set the amount of time that Keymacro waits between keystrokes. This means that you can have a

macro, that lets you click on a button, and immediately close the dialog after a second or two. * **Default Key:** This allows you to assign the Alt key to a macro by default, even if you're not using Alt for other purposes. * **Add or Remove:** This option lets you make changes to a macro or assign a new key to it. For example, if you press F3, you can use the Alt+Del keys to remove it. * **Change:** This section lets you change the shortcut that you assign to a macro. * **Continue with Current Macros:** When this option is checked, Keymacro will resume the current macro when it's closed. * **Remove:** This option will allow you to remove macros. * **Categories:** You can add new categories that will let you access macros easily. Each macro will have its own category, and you can have several

categories if you want to. You can assign macros to these categories. * **Compilation Settings:** This section lets you set the script compilation settings. * **Autocompile:** When checked, Keymacro will check for updates and compile the 81e310abbf
